

# Uno

Designed by Simone Viola

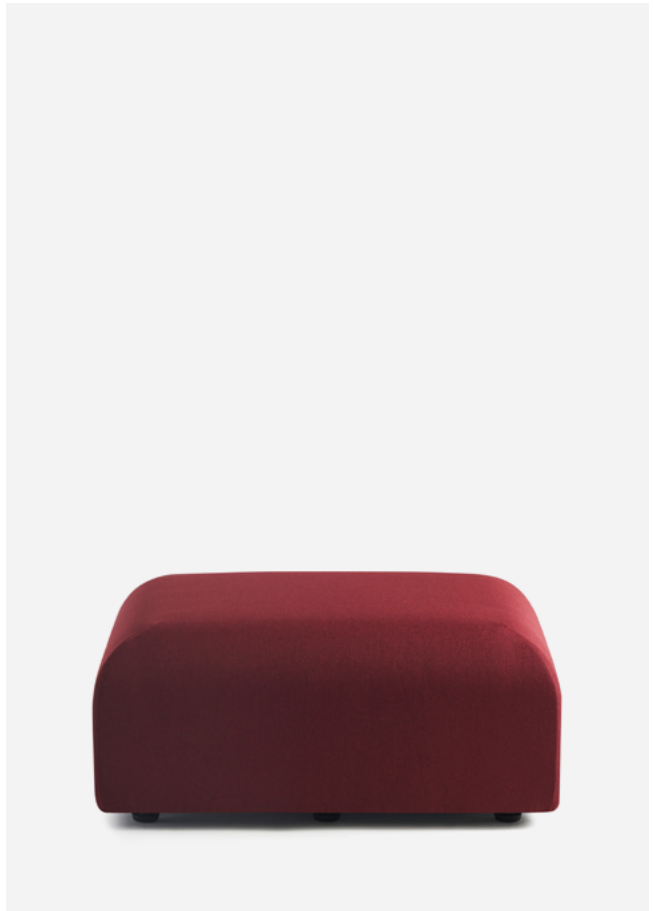

Uno distills modular seating into its simplest and most versatile form.

Composed of just two elements, an open module and a backrest module, Uno grows through aggregation, forming layouts that can expand in any direction.

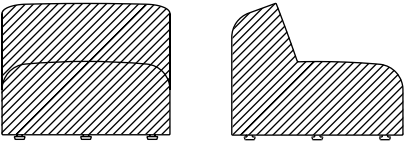

Its square structure, made from recycled polypropylene, covered with molded foam and a removable fabric cover, creates a clear architectural volume designed for maximum configurational freedom.

An intuitive connector system securely links modules together while enabling quick reconfiguration whenever desired.

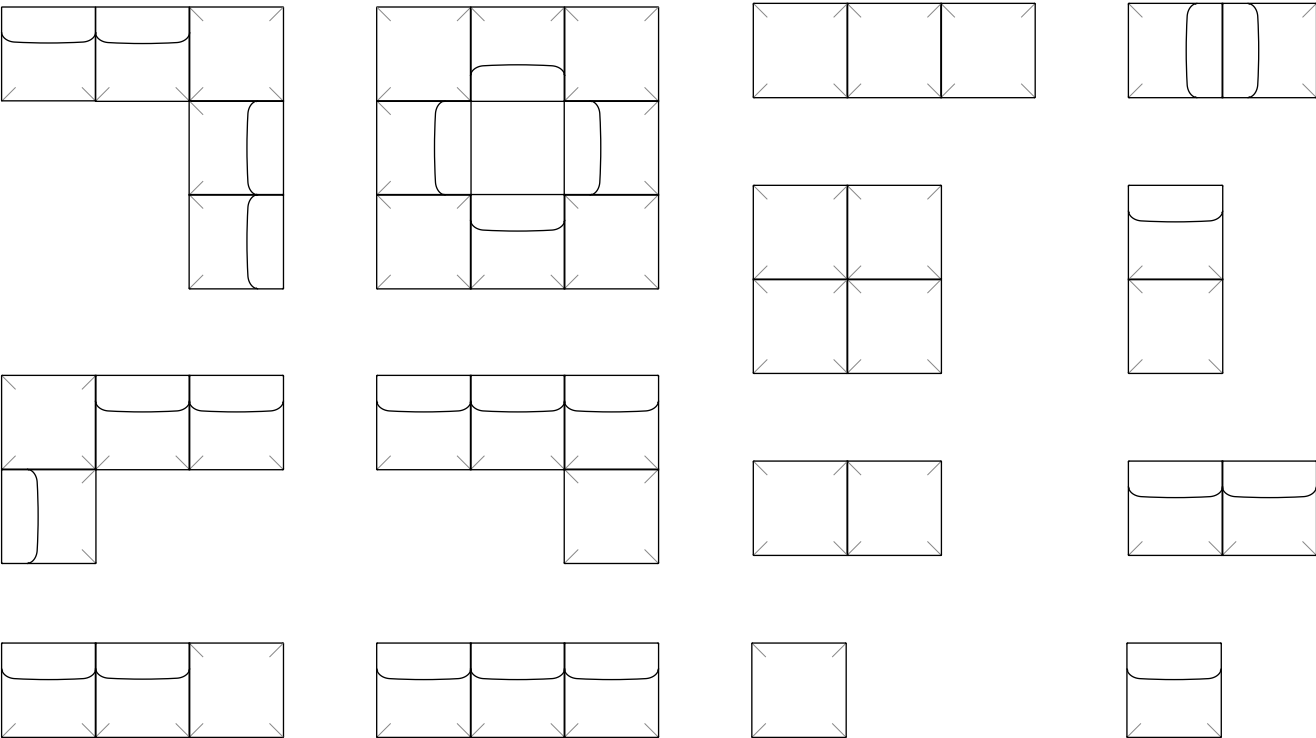

Lightweight and endlessly flexible, Uno is conceived as an open system that can be shaped freely across space. Modules connect, separate, and recombine with ease, generating configurations that evolve naturally over time in response to changing needs, activities, and environments.
